24TH WEEK

11

TUESDAY

never makes it algorithmic.

08.00  
Q Why Didn't he give a Full Method?

09.00  
Because:

10.00  
1. Ontology and language were not yet fully separated in Aristotle's time. He was the first to make distinctions that would only be formalized centuries later.

11.00  
2. His method was often dialectical and analogical, not based on strict formal systems (as Frege or modern logicians would want).

12.00  
3. He was writing for readers who shared his cultural-linguistic context — native speakers of Greek, trained in the Platonic dialectical tradition.

13.00  
Q Why does Aristotle treat 'belonging not to every' as a particular?  
Note: Because 'not to every' can indicate either it belongs 'not for some' or for 'none at all'... if it is for 'none at all', it should be universal in that case.
